

Intern (Werkstudent) Data Science

Our mission at fulfin is to enable online businesses to grow to their full potential. We integrate with digital marketplaces and third party logistics to offer a unique form of fulfilment financing. Our product allows ecommerce sellers to flexibly and efficiently finance their inventory purchases and make reasonable repayments based entirely on their own success and sales velocity.

The role

Different projects - dependent on your abilities and interest:

- Data Visualization for the risk management module
- Predictive models and automated forecasting in the ecommerce space on topics of: probability of default, payment morality, product performance on digital marketplaces, etc.

Our ask of you

- Skilled in the usage and application of data science and machine learning tools (python, R, Spark/Scala etc.)
- An insatiable curiosity regarding real world business problems and the power of both data visualization and machine learning

Why work with us?

- Work with knowledgeable, experienced and networked founders and help build a unique fintech company
- Experience real startup life working in the Werk1 Incubator
- Gain insights into fintech, ecommerce, risk, ML/AI and more

Send your application including your CV or LinkedIn profile to Nathan at talents@fulfin.io
